

Acknowledgments

I will always remember the years of my graduate studies at the Ben-Gurion University of the Negev as one of the most exciting periods in my life. I take the opportunity to thank the people who led and accompanied me during this fascinating period.

Eyal Solomon Shimony, my teacher and advisor, introduced me to the world of artificial intelligence research, and educated me in research methodologies. He led me with patience through the years of my studies, and his bright ideas and insightful remarks have always been inspiring to me. Not just an excellent teacher, he has also been an attentive listener, giving attention and showing care toward every detail, and welcoming discussion of even half-baked ideas. I only hope I could ever provide someone else with the same level of guidance and support I received.

My research would not be possible without the education in computer science which I received at the department. I am thankful to my teachers who supplied me with systematic knowledge in a wide range of areas, and would like to extend my thanks to Ronen Brafman, Amos Beimel, Matya Katz, and Avraham Melkman, among others. As much as from the courses, I learned from collaborative research, which I was happy to conduct with Ronen Brafman, who also welcomed informal presentation of my ideas on several occasions, and Ariel Felner.

The technical and administrative staff at the Computer Science Department was always supportive and helpful. With their continuing assistance I was able to concentrate on study, research, and teaching.

Alexandra Polyan was the source of inspiration during an extremely challenging period of my studies. Her ability to listen to and discuss ideas from a wide range of areas is invaluable.

My research was partially supported by Israeli Science Foundation, by the Lynne and William Frankel Center for Computer Sciences, and by the Paul Ivanier Center for Robotics Research and Production Management.
